

Navicat for Redis is an easy-to-access visual interface to visualize and optimize Redis data. It provides a robust set of features for making routine management tasks simpler, easier and more efficient compared to using text commands alone. Connect to any local/remote Redis servers, and compatible with cloud databases like Redis Enterprise Cloud, Amazon ElastiCache, Google Memorystore and Microsoft Azure.

FEATURE OVERVIEW

Data Viewer

View, edit, search and sort keys and data with our data viewer. You can facilitate your edits in the classic spreadsheet-like Grid View, Tree View, and with our built-in editor. Navicat provides you with the tools you need to manage your data efficiently and ensure a smooth process.

User Management

Manage users and their associated permissions in an intuitive interface. You can create, edit and delete users in minutes without having to type commands, and easily create new privilege groups (selectors) to apply multiple sets of rules to a user.

Query Edit

Create, edit and run queries with Query Editor without worrying about syntax and proper usage of commands. Code fast with Code Completion and Snippet, which gives you suggestions for keywords and reduces the repetition in coding.

Backup/Restore

Backup and restore your data locally with our powerful Backup/Restore solution that guides you through the process and reduces the potential for errors. You can even set up automation tasks to run your backup jobs regularly and receive immediate notifications of any failures.

Pub/Sub

Send messages and subscribe to specific channels using our simple and intuitive UI. You can save the channels as a profile, or assign colors to the channels to easily distinguish the corresponding channels and their messages.

Native Design

Navicat is natively designed specifically for a particular platform. We give you a more familiar and optimized experience that feels natural for the system you are running. Navicat delivers more stable and enjoyable experiences for your database management.

Automation

Automate repeatable deployment process like database backup and query execution at specific times or days. No matter where you are, you can always get the job done.

Collaboration

Synchronize your connection settings, queries, snippets and virtual group information to the cloud service so you can get real-time access to them, and share them with your coworkers anytime and anywhere.

Secure Connection

Ensure every connection is secure, stable, and reliable by establishing secure connections through SSH Tunneling. Navicat supports more encryption formats and high-performance environments for worry-free connections over any network.

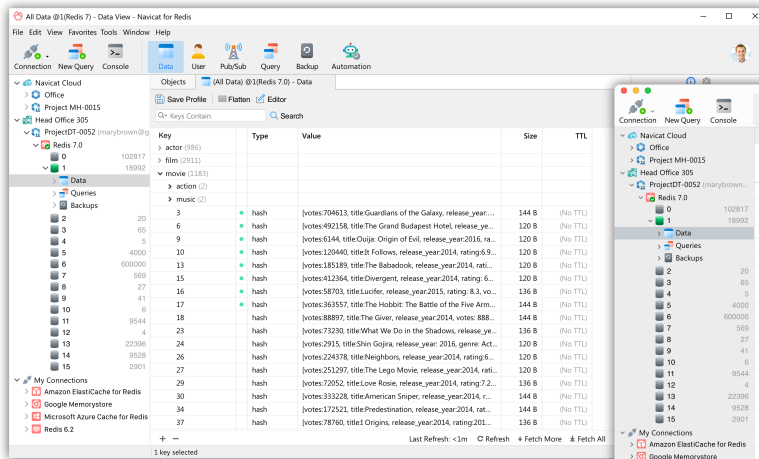

Cross-Platform Licensing

Cross-platform licensing is now available. Whether you're operating on Windows, macOS, or Linux, you can purchase once and select a platform to activate and later on transfer your license.
